

DIGITAL LITERACY PROJECT REPORT

Name: Toshaan Bhale

Registration No.: 25BCE10043

Program: CSE (CORE) – 1st Year

Course Code: CSE-0001

Submission Date: 31st March 2026

Introduction

In today's digital era, technology plays a crucial role in education, communication, and professional growth. As a Student Digital Ambassador, this project is undertaken to promote digital literacy and responsible online behaviour among students. Many individuals use digital platforms daily but may not fully understand how to use them safely, effectively, and ethically.

This project focuses on developing a Digital Literacy Portfolio that highlights important skills such as creating a professional online presence, using digital tools efficiently, practicing proper communication, and understanding cyber safety.

The project consists of five tasks, each covering a key aspect of digital literacy, including awareness creation, portfolio building, platform usage, email etiquette, and cybercrime awareness. Overall, this project helps in building essential skills required for academic and career success.

Task 1: Digital Literacy Awareness Infographic

For this task, I designed an infographic using Canva, a user-friendly tool for creating visual content. The infographic explains the concept of digital literacy, useful digital tools, and safe internet practices.

I described digital literacy as the ability to use digital technologies effectively and responsibly. I also included tools such as Google Docs, MS Word, and GitHub that are helpful for students in their academic work. Additionally, I highlighted important safety tips like using strong passwords, avoiding suspicious links, and protecting personal information.

This task improved my creativity and helped me understand how to present information in a clear and visually appealing way.

Task 2: Student Digital Portfolio

In this task, I created accounts on three important platforms: GitHub, LinkedIn, and ResearchGate.

GitHub is used for storing and sharing coding projects. I plan to use it to upload my work, practice programming, and build a strong technical portfolio.

LinkedIn is a professional networking platform that helps in building connections and exploring career opportunities. I will use it to create my professional identity and connect with industry professionals.

ResearchGate is an academic platform where students and researchers can explore research papers and share knowledge.

These platforms will help me in skill development, networking, and career growth over the next few years.

Task 3: Coding & Collaboration Platforms

For this task, I explored both coding and collaboration tools. I used HackerRank to solve a beginner-level coding problem, which helped me understand basic programming concepts and improve my logical thinking skills.

I also created a Google Form titled “Digital Literacy Awareness Quiz” with multiple-choice and short-answer questions. This helped me understand how to collect responses and analyze data using Google Sheets.

This task enhanced my coding skills as well as my ability to use digital tools for collaboration and data management.

Task 4: Professional Email & Etiquette

In this task, I learned how to write professional emails and maintain proper digital communication. I drafted two emails—one requesting an assignment deadline extension and another applying for an internship opportunity.

This helped me understand the importance of clear subject lines, polite language, and proper structure in emails. I also created a checklist of social media do’s and don’ts to promote responsible online behaviour.

I learned that poor communication, such as unclear or informal emails, can lead to misunderstandings. Therefore, maintaining professionalism in digital communication is very important.

Task 5: Cybercrime Awareness

For this task, I studied cybercrime with a focus on phishing and online payment fraud. Phishing is a type of fraud where attackers trick users into sharing sensitive information such as passwords, OTPs, or bank details.

The fraud usually begins with fake emails or messages that appear to be from trusted sources. Victims are then redirected to fake websites where they unknowingly enter their personal information. This information is later used for financial fraud or identity theft.

Students and unaware users are common targets. The consequences include financial loss, data theft, and emotional stress.

This task helped me understand the importance of being cautious online. I learned to verify links, avoid sharing confidential information, and stay alert while using digital platforms.

Conclusion

This project provided valuable insights into digital literacy and responsible online behaviour. I learned how to use digital tools effectively, communicate professionally, and protect myself from cyber threats.

It also made me realize that even small mistakes online can lead to serious consequences. Therefore, awareness and careful usage of digital platforms are very important.

Overall, this project has helped me develop essential skills that will support my academic journey and future career.
